1. INTRODUCTION

1.1 What is Git?

Git is a distributed version control system used to track changes in files, especially in software development. It helps multiple developers work on a project efficiently by maintaining version history.

1.2 What is Version Control?

Version Control is a system that records changes to files over time so that previous versions can be retrieved.

Importance:
* Tracks changes
Prevents data loss
Supports collaboration
Helps in debugging

1.3 What is GitHub

GitHub is a cloud-based platform that hosts Git repositories. It allows developers to collaborate, share code, and manage projects online.

1.4 Difference Between Git and GitHub

Git
Version control rol system
Hosting platform
Works locally
Works online
Tracks changes
Stores repositories
Command-line tool
GUI + Web interface

2. COMMANDS PERFORMED

2.1 Git Configuration Commands

Commands:
```
git --version
git config --global user.nam user.name "Monish"
git config --global user.email "@email"

git config user.name

git config user.email

git config --list
```

git help

Description:

git --version ? Displays installed Git version

git config --global user.name ? Sets username

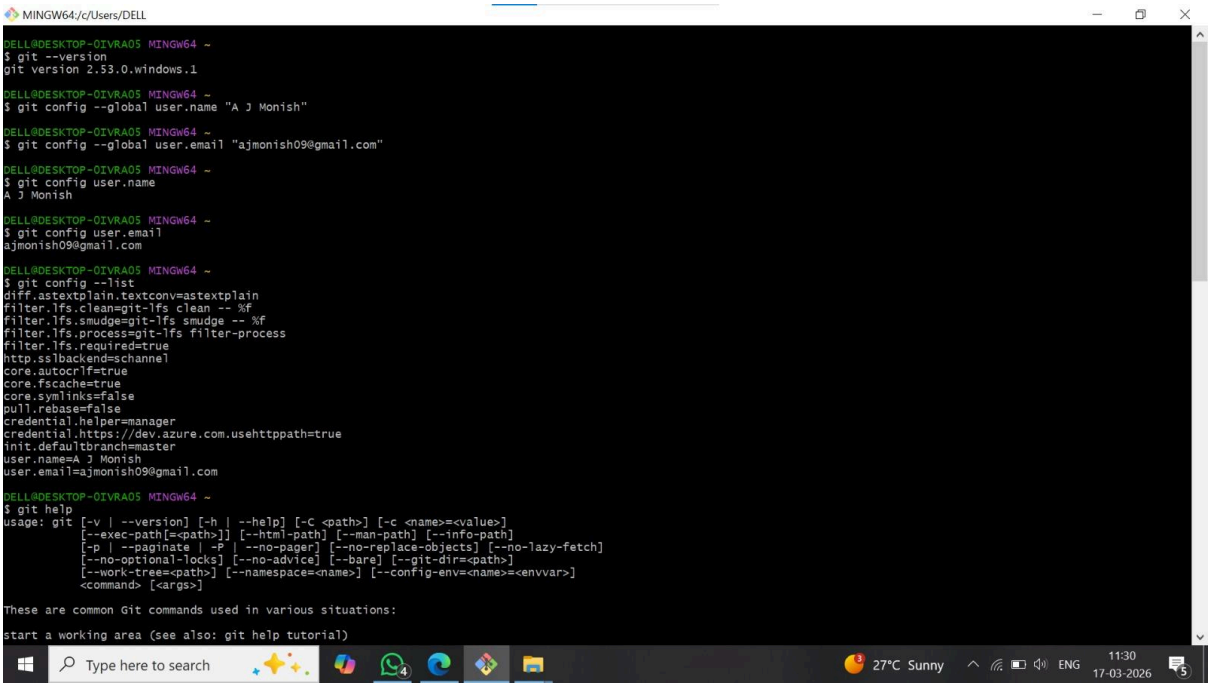
git config --global user.email ? Sets email

git config user.name / email ? Displays user details

git config --list ? Shows all configurations

git help ? Displays help menu

Output (screenshot):



2.2 Navigation & Listing Commands

Commands:
pwd
cd
cd documents
1s -a
ls -d
Description:
pwd ?
Shows current directory

cd ?
 Changes directory

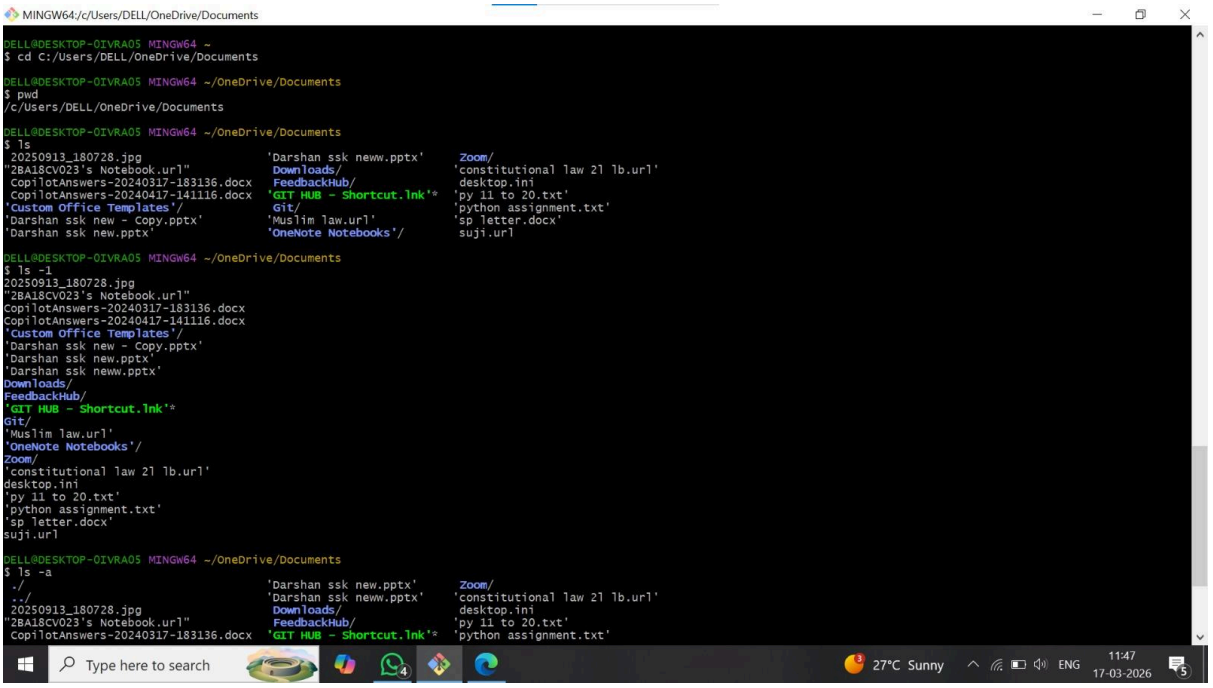
ls ?
 Lists files

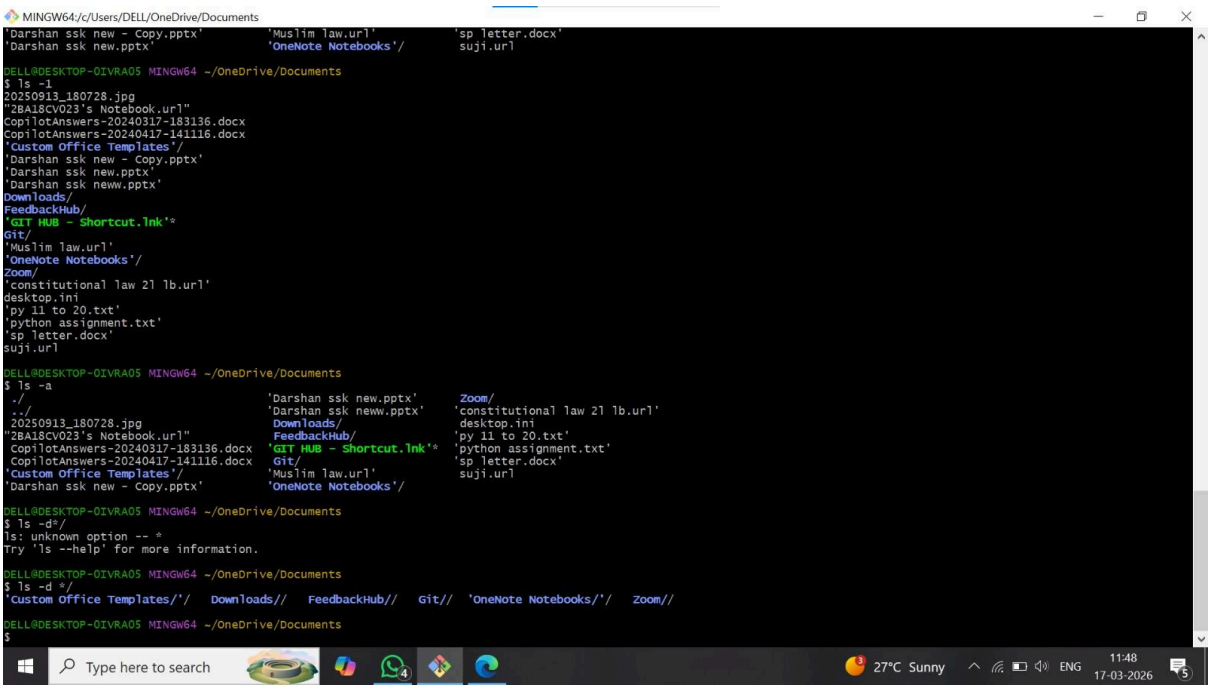
1s -1 ?
 Detailed file view

1s -a ?
Shows hidden files

ls -d ?
 Incorrect usage caused an error

Note:
An incorrect command was executed which resulted in an error and was later corrected.
Output:-





file.html file.css file.cpp file.js file.xml file.md

2.3 File Creation Commands
Commands:
touch file.txt
touch file.java
file.pdf file.json
Description:

* touch file.txt ?
 Creates a file

touch multiple files ?
Creates multiple files at once

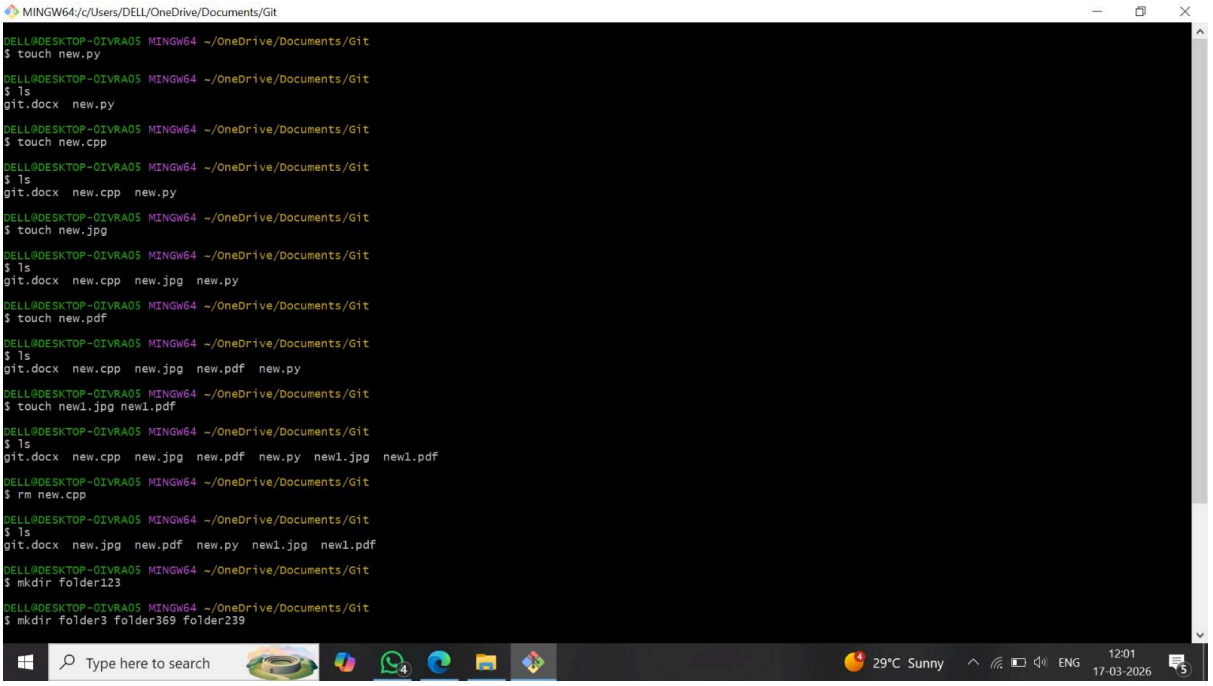
2.4 Folder Creation Commands

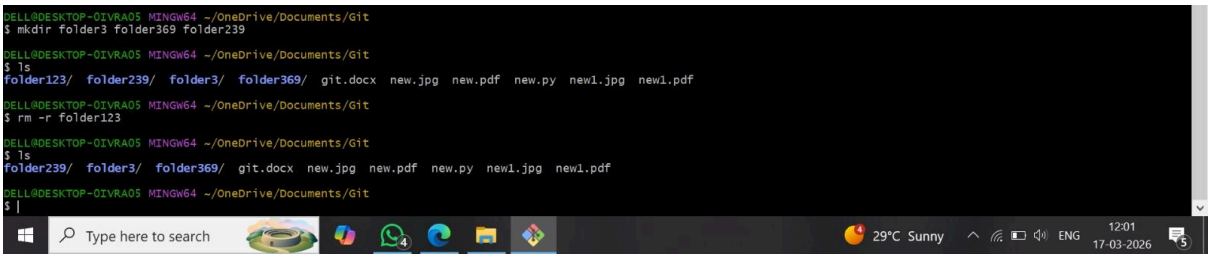
Commands:
mkdir folder123
mkdir folder3 newfolder369 folder239/

Description:

Creates multiple directories

Output:





2.5 File Operations (View & Write)

Commands:

echo "this isa trial file" > file1.txt

echo “created using echo" >> file1.txt

cat filel.txt

cat file2.txt

cat file2.txt

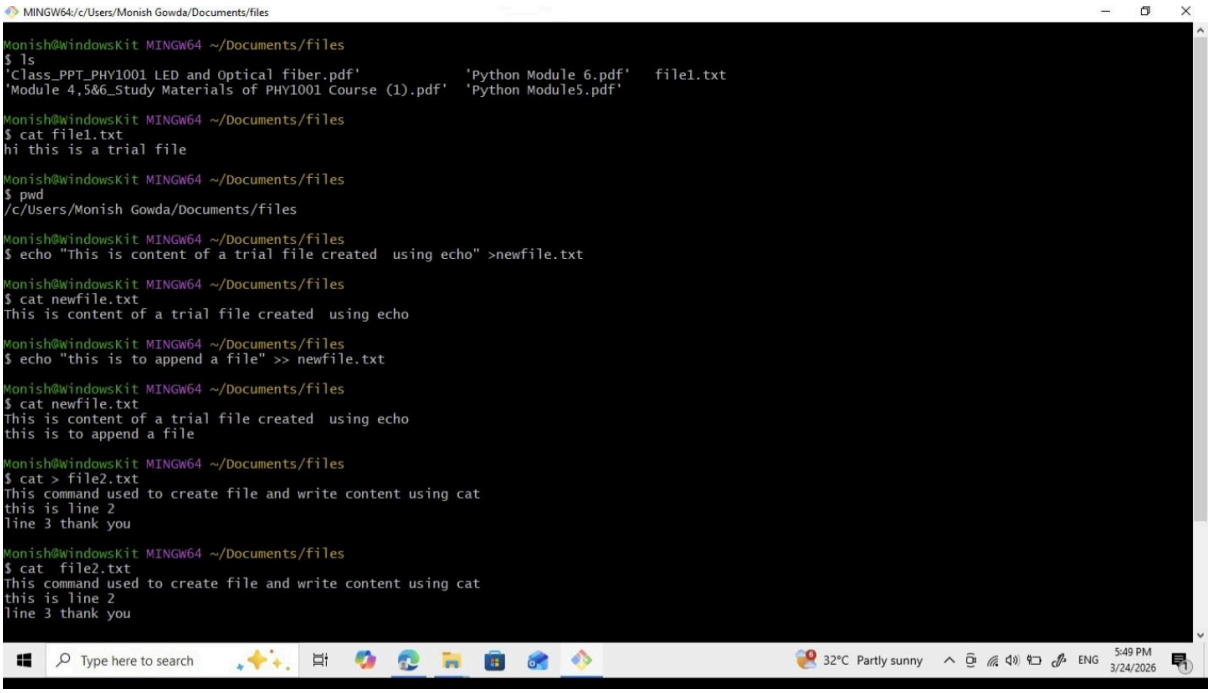
Description:

* echo > ? Writes content

echo >> ? Appends content

* cat ? Displays file content

Output:



2.6 File & Folder Deletion

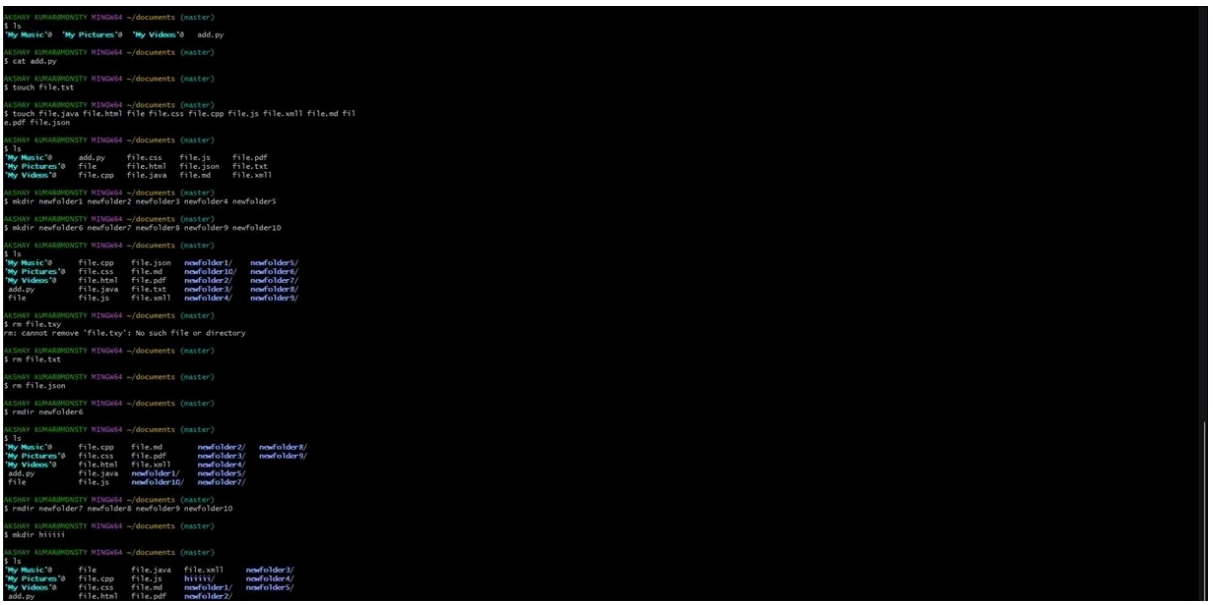
Commands:
rm file.txt
rm file.txt
rm file.json
rmdir newfolder6
rmdir newfolder7 newfolder8 newfolder9 newfolder10

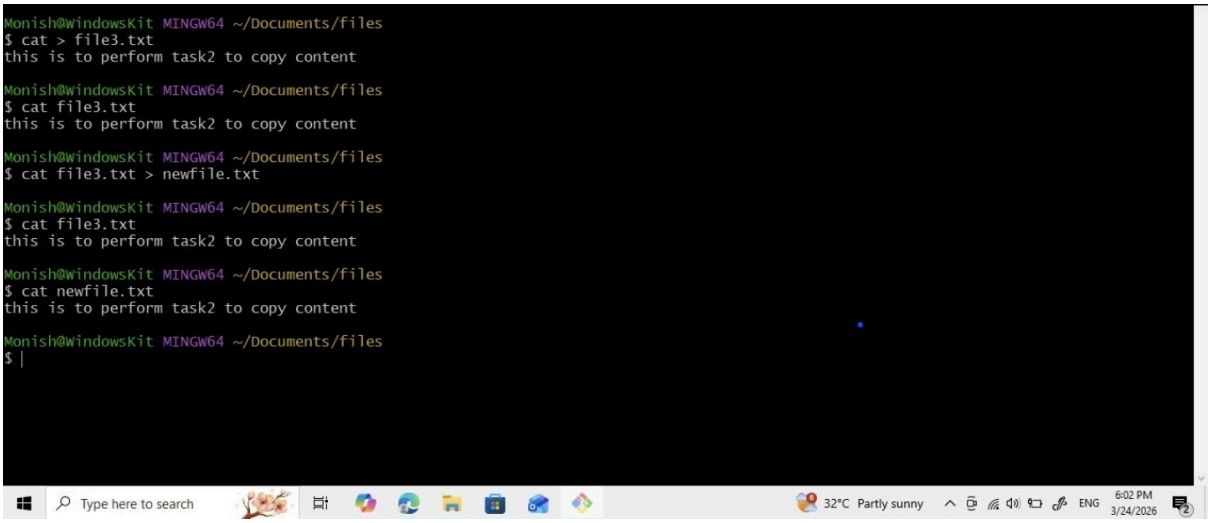
Description:

rm ?
Deletes files

rmdir ?
Deletes empty directories

Incorrect file name caused an error which was corrected.





2.7 VI Editor Commands Command: vi monish.txt
Description: Opens file in vi editor.
Inside vi: *
i ?
Insert mode

* Esc ?
Exit insert mode

* :wq ?
Save and exit

* :q! ?
Exit without saving

Output:

```
Monish@WindowsKit MINGW64 ~/Documents/files
$ git config --global core.editor "vi"

Monish@WindowsKit MINGW64 ~/Documents/files
$ git var GIT_EDITOR
vi

Monish@WindowsKit MINGW64 ~/Documents/files
$ git config --global user.name "A J MONISH"

Monish@WindowsKit MINGW64 ~/Documents/files
$ git config --global user.email "AJMONISH09@Gmail.com"

Monish@WindowsKit MINGW64 ~/Documents/files
$ vi monish.txt
```

MINGW64:/c/Users/Monish Gowda/Documents/files

```
Monish@WindowsKit MINGW64 ~/Documents/files
$ git var GIT_EDITOR
vi

Monish@WindowsKit MINGW64 ~/Documents/files
$ git config --global user.name "A J MONISH"

Monish@WindowsKit MINGW64 ~/Documents/files
$ git config --global user.email "AJMONISH09@Gmail.com"

Monish@WindowsKit MINGW64 ~/Documents/files
$ vi monish.txt

Monish@WindowsKit MINGW64 ~/Documents/files
$ vi monish.txt

Monish@WindowsKit MINGW64 ~/Documents/files
$ vi monish.txt

Monish@WindowsKit MINGW64 ~/Documents/files
$ vi monish.txt

Monish@WindowsKit MINGW64 ~/Documents/files
$ vi monish.txt

Monish@WindowsKit MINGW64 ~/Documents/files
$ cat monish.txt
